THINGS TO KNOW

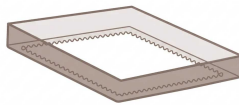

HEAD CAP

Production detail to minimize movement/shifting ensuring tight fit over box spring. This 6" feature is cost efficient and highly effective.

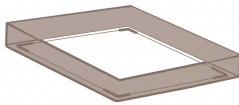

ELASTIC HUGGER

An interior "fitted sheet" utilizing continuous elastic to minimize movement and secure to boxspring. Not visible to the guest, an internal component only.

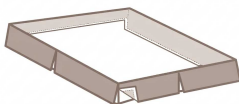

CONTINUOUS ELASTIC

Elastic is sewn into the bottom edge all around the box spring cover, therefore making it 'continuous' on all sides of the drop.

ELASTIC IN CORNERS

To prevent puckering or gathering of decorative fabric, we will often use elastic in corners only. A 12" piece of elastic is added to the corner (6" on either side of the seam).

LINING

This extra layer of poly/cotton fabric may be used to add weight and fullness to the overall aesthetic.
